DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

✓ - In claim 1, line 9, after "the processor" insert a semicolon --;--.

This change was made to correct the typographical error.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claim 1 recites an antenna system for an aircraft for use with a GPS comprising an aircraft having an aircraft attitude determination system providing attitude data relating to aircraft roll, a translation module connected to the aircraft attitude determination system receiving the attitude data and outputting output data, a processor receiving the output data and providing a drive signal, a controller receiving the drive signal, an articulator driven by the controller, and an antenna attached to the articulator driven by the controller oppositely to the aircraft roll.

Claim 10 recites an antenna system for an aircraft for use with a GPS comprising an aircraft having an aircraft attitude determination system providing attitude data relating to aircraft roll, a processor receiving an input originating from the aircraft attitude determination system and providing a drive signal, a controller receiving the drive

signal, an articulator driven by the controller, and an antenna attached to the articulator driven by the controller oppositely to the aircraft roll.

Claim 17 recites an antenna system for an aircraft for use with a GPS comprising an aircraft having an aircraft attitude determination system sensing attitude data relating to aircraft roll, a translation module connected to the aircraft attitude determination system receiving the attitude data and outputting output data, a processor receiving the output data and providing a drive signal, a controller receiving the drive signal, an articulator driven by the controller, and an antenna attached to the articulator driven by the controller oppositely to the aircraft roll.

None of the prior arts shows or suggests the antenna system for an aircraft above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
